

Data Sheet: Optional sheet pile feeder SB-097

The in-line optional **Sheet Feeder** SB-097 allows a Smart-binder which is fed from a web-cutter to also be fed off-line from piles of cut-sheets which are loaded in the feeder.

In-line operating mode

To run in-line, the 'Lift Table and Bridge conveyor' is raised to its highest position, as shown below. The bridge conveyor, which is integral with the lift table, then transports sheets from the upstream web-cutter through the sheet feeder to the Smart-binder infeed.

SB-097 in its upper position, to run in-line

Company registered in England, number 03703149. UK VAT Registration number 697 9379 42

Off-line sheet feed mode

When running 'off-line' the 'lift table and bridge conveyor' is lowered and bar-coded sheets are loaded onto the bridge conveyor, as shown below. The feeder then feeds sheets one by one off the top of the pile into the Smart-binder at rates up to 400 sheets/min.

Notes

The changeover between in-line and off-line operation is less than one minute. The feeder must be stopped for some minutes to reload the pile, but this pile reload time can be reduced if using the optional HPL-100 handling trolley system.

Each printed sheet must have a bar code, or Datamatrix code, printed on it to allow the Smart-binder to control booklet integrity.

The length of the SB-097 feeder is 1230mm.

The feeder requires a 10A 3-phase power supply.

The height of the bride conveyor can be varied between 925mm and 1100mm (by raising or lowering the complete feeder).

SB-097 maximum and minimum sheet sizes

Sheet length	Maximum 760 mm	Minimum 192 mm
Sheet width	Maximum 500 mm	Minimum 100 mm
